SOCH FACT CHECK

Bug Report

Status: Completed | Owner: Sameen Khan

Bug Summary

This document outlines 15 bugs identified during the quality assurance review of the Soch Fact Check website (https://www.sochfactcheck.com). Each bug is described in detail below, followed by a corresponding screenshot for visual reference.

Bug 1: Urdu Page Has Incorrect Word: "parh" Should Be "parhein"

On the Urdu category page, the word **“parh”** is used, which is not correct in Urdu. It should be changed to **“parhein”** (which means “read”). This is a small content mistake that affects the language accuracy of the page.

Bug 2: Proper Email Validation Not Showing (Generic Messages Displayed)

When a user enters an invalid email address in the Email field, a generic error message is shown. Instead, a clear and specific message like **“Please enter a valid email address”** should be displayed, so users can easily understand and fix the issue.

Bug 3: Validation Message Should Say: "This Field Is Required"

When required fields (like Email, Subject, or Message) are left empty and the form is submitted, the validation messages are inconsistent or unclear. A standard message like **“This field is required.”** should be shown below each empty field to ensure a clear and consistent user experience.

Bug 4: Alignment Can Be Adjusted for Button and Validation Message Box

On the submission form page, the **“Send Message”** button and the form-level validation/confirmation messages are not properly aligned with the rest of the form. These elements should be aligned correctly to ensure a clean, consistent, and professional layout.

Bug 5: Active Tab Not Highlighted When User Is on a Page

When a user visits any page (such as About, Topics, Methodology, or Contact), the navigation menu does not highlight the active tab. This makes it unclear which page the user is on. The current page tab should be highlighted (e.g., underline, bold, or different color) to improve navigation and user experience.

Bug 6: White Space Showing Selection Cursor

On the submission form page, there is a white space near the file upload section where a text cursor appears when hovering. This area should not be interactive, and the cursor should not show there, as it can confuse users.

Bug 7: Full Link Showing in Success Banner When Link Is Copied

When a user copies an article link, a success message appears showing the full URL, which looks cluttered. Instead, it should display a simple message like **“Copied to clipboard!”** without showing the link.

Bug 8: No Cross (Close) Icon Showing for Popup

A popup on the website does not have a visible close (✕) button, making it difficult for users to dismiss it. A clear close icon should be added so users can easily close the popup.

Bug 9: Contact Tab: Inconsistent Heading, Sub-heading, and Button Labels

On the Contact/Submit page, the labels are inconsistent: the page title says “Submit,” the sub-heading says “Submit a Complaint,” and the button says “Send Message.” Since all refer to the same action, they should use consistent wording throughout to avoid confusion.

Bug 10: Page Content Appears Incorrect

The content on a specific page of the website appears incorrect or irrelevant and may include placeholder text (such as Lorem Ipsum). It does not match the expected content for that section and should be reviewed and updated with accurate, relevant, and properly published content for the Soch Fact Check website.

Bug 11: Heading Not Center Aligned

On the Author or Editorial Team page (e.g., https://www.sochfactcheck.com/author/adminn/), the author name heading displayed in the page hero/banner section is not center aligned. It appears left-aligned instead of being centered within the banner area, which is inconsistent with the expected layout. The heading alignment should be corrected to center-align it properly within its container.

Bug 12: Code Block Option Showing Black Background in Comment Editor

In the comment editor toolbar available on article pages, when the 'Code Block' formatting option is selected from the toolbar, it applies a black background to the entire comment text input area. This is unintended behavior — the black background makes the text completely unreadable and disrupts the UI of the comment section. The code block styling should be corrected so it does not apply a black background in this context.

Bug 13: Red Highlighted Border Not Aligned with CAPTCHA Border

On the comment section of article pages, when a validation error occurs (such as the CAPTCHA not being completed before submitting a comment), a red error/highlight border is displayed to flag the issue. However, this red border is misaligned with the CAPTCHA widget's own border box. The red error indicator appears shifted or offset, making it look visually disconnected from the element it is

highlighting. The border alignment should be corrected to wrap accurately around the CAPTCHA widget.

Bug 14: Comment Section on Urdu Pages Should Also Be in Urdu

On the Urdu version of article pages (accessible via the Urdu section of the website), the comment section is still displayed entirely in English. Labels such as 'Be the First to Comment', 'Post Comment', field placeholders ('Name', 'Email', 'Website'), and other UI text within the comment section remain in English. Since users visiting Urdu articles expect a consistent Urdu-language experience, the comment section should be localized to Urdu to match the page language.

Bug 15: Urdu Language Alignment Causing Comment Section UI to Break

Due to the right-to-left (RTL) text direction of the Urdu language, the comment section's UI layout is breaking and losing its proper visual structure on Urdu article pages. Elements within the comment box (such as input fields, avatars, buttons, and text) are becoming misaligned, overlapping, or rendering incorrectly because the comment component does not properly support RTL text direction. The comment section layout should be updated to correctly handle Urdu (RTL) alignment.
